

## **Warning: False Readings**

- Pipes can have isolated magnetic spots, or areas of fully magnetised circumferences, usually at welds and cut ends. This can generate false readings.
- To prevent false readings, confirm the device is at least 1m away from the cut ends and welds and move the device 180° around the circumference.
- Try it out yourself by calibrating the device away from one of the above and then move it close/over a cut or weld.

KRAKEN

Thank you for using the Pig Sniffer by Kraken Subsea for more great products and information go to www.krakensubsea.co.uk
